DRUGS THAT CAN CAUSE HYPONATRAEMIA

Diuretics

Thiazides	Loop	Potassium sparing	Combined
Bendroflumethiazide	Furosemide	Amiloride	Co-Amilozide
Chlortalidon	Bumetanide	Triamterene	Co-Amilofruse
Cyclopenthiazide	Torazemide	Spironolactone*	Burinex
Indapamide		Eplerenone*	
Metolazone		Losartan**	
Xipamide		Valsartan**	
		Ibersartan**	

**Aldosterone antagonist, **Angiotensin II receptor antagonist*

Anti-depressants

All anti-depressants can cause hyponatraemia.

Tricyclic Antidepressants and drugs related to tricyclic anti-depressants

Tricyclic Antidepressants		Related to tricyclic anti-depressants
Sedative	**Less sedative**	
Amitriptyline	Imipramine	Mianserin
Clomipramine	Lofepramine	Trazodone
Dosulepin	Nortriptyline	
Doxepin		
Trimipramine		

Phenothiazines

	Group 1	Group 2	Group 3
Sedative effects	**+++**	**++**	**+**
Antimuscarinic	**++**	**+++**	**+**
Extrapyramidal	**++**	**+**	**+++**
	Promazine	Pericyazine	Fluphenazine
	Chlorpromazine	Pipotiazine	Perphenazine
	Levomepromazine		Prochlorerazine
			Trifluoperazine

Selective serotonin re-uptake inhibitors (SSRI's)

Citalopram

Escitalopram

Fluoxetine (Prozac)

Fluvoxamine

Paroxetine

Sertraline

Mono aminine oxidase inhibitors (MAO inhibitors)

Phenelzine

Isocarboxiacid

Tranylcypromine

Moclobemide (reversible MAO inhibitor)

Proton pump inhibitors

Omeprazol

Lansoprazol

Esomeprasol

Other

Flupentixol

Venfalaxine (Efexor)

Mirtazapine

Duloxetine

Reboxetine

Tryptophan

Gliclizide

Glimepiride

Carbamazepine (Tegretol)

Valproic acid (Kepra)
